Pest Tracking

Monitor and track agricultural pests including insects, diseases, weeds, and nematodes.

Data Reporting

Submit and share field observations and pest activity data with the community.

Visualization

View interactive maps and visualizations of pest distribution and activity.

Forecasting

Access predictive models and forecasts for pest outbreaks and population trends.

MISSION

To provide farmers and agricultural professionals with accurate, timely information for effective pest management decision-making.

AUDIENCE

Farmers, agronomists, researchers, and agricultural professionals seeking to monitor and manage crop pests effectively.

PRODUCTS

Interactive maps, forecasting tools, data visualization, and reporting systems for comprehensive pest monitoring.

About Predictive PestGuard

Predictive Pest Outbreak Monitoring is an AI-powered platform that helps farmers and researchers predict pest outbreaks using weather data and historical patterns. Our mission is to protect crop yields and increase farm profitability through science-based pest tracking and forecasting.

Key Features

Weather-based Predictions

Real-time pest predictions based on current and forecasted weather conditions.

Interactive Dashboard

Visualize pest data and trends with our intuitive, interactive dashboard.

AI-driven Risk Assessment

Advanced AI algorithms assess and predict the risk of pest outbreaks in your area.
